

Post-Session Resources

Session 4: Build Fast, Ship Secure · Open Source & Security

[GDG on Campus RVCE](#) · [DevSprint '26](#)

You came in not knowing if your project was safe.
You're leaving with the fixes. Now keep going.

Your 30-Day Open Source Checklist

GSoC orgs look at your GitHub history, not your resume. Start building it this week.

W1	Week 1 — Get Started - Start a small project repo with a proper README and commit history - Find 3 open source projects you find interesting - Leave a thoughtful comment on 3 open issues (no code needed) - Add a .gitignore and .env setup to your existing projects
W2	Week 2 — First PR - Get your first PR merged — docs fix, typo, or small bug - Choose one technical domain to focus on (web, ML, DevOps, etc.) - Run npm audit or pip check on all your projects — fix what you find - Write a Dockerfile for one of your projects
W3	Week 3 — Build Momentum - Hit 3 PRs merged total (small and consistent beats big and rare) - Open source at least one of your college projects - Set up GitHub Dependabot on your repos — auto-PR for security fixes - Browse GSoC org list — shortlist 3 orgs that match your interests
M1	Month 1 — Visible Profile 1 project live with proper README, Dockerfile, and no secrets in history - Active GitHub profile — green squares are visible proof of work - At least 5 meaningful contributions (comments, PRs, issues filed) - Have the OWASP Top 10 and LLM Top 10 bookmarked and skimmed

Do This Tonight — 4 Steps to Your First Contribution

1

Find one open source repo you find interesting

2

Read the open issues — find one labelled good-first-issue or help-wanted

3

Leave a thoughtful comment: 'I'd like to try this, here's my initial approach...'

4

Star the repo and follow the maintainer

No code required for step 1 — a thoughtful comment is a real contribution.

"GSoC is built on what you've already done, not what you plan to do."

Tools to Install This Week

Secret Scanning & History Cleanup

Tool	What it does
Gitleaks github.com/gitleaks/gitleaks	Scan your entire repo for leaked secrets automatically — runs in seconds
TruffleHog github.com/trufflesecurity/trufflehog	Scans git history, CI/CD pipelines, and cloud storage for secrets
BFG Repo Cleaner rtyley.github.io/bfg-repo-cleaner	Fastest way to remove secrets from git history — much simpler than git filter-branch

Dependency & Vulnerability Scanning

Tool	What it does
Snyk snyk.io	Free dependency scanner — connects to GitHub and auto-suggests fixes
GitHub Dependabot docs.github.com/en/code-security/dependabot	Enable in repo settings: auto-creates PRs to fix vulnerable dependencies
npm audit Built into npm — no install needed	Run npm audit in any Node project — npm audit fix to auto-resolve

Docker Learning

Resource	Description
Play with Docker labs.play-with-docker.com	Free browser-based Docker sandbox — no install needed, great for practicing after the session
Docker Getting Started docs.docker.com/get-started	Official beginner-friendly guide — covers images, containers, volumes
Dockerfile Best Practices docs.docker.com/develop/develop-images/dockerfile_best-practices	Common mistakes to avoid — read after writing your first one

Security References

Resource	Why it matters
OWASP Top 10	The definitive list of web application vulnerabilities — industry standard reference
OWASP LLM Top 10	Security risks specific to LLM-powered apps like your Gemini project — directly relevant
MITRE CVE Database cve.mitre.org	Look up any known vulnerability by ID or package name
PortSwigger Web Security Academy portswigger.net/web-security	Free hands-on labs for every OWASP category — best platform to actually practice, not just read

Open Source Contribution Starting Points

Platform	What you'll find
Good First Issues goodfirstissues.com	Curated beginner-friendly issues across hundreds of repos — filtered by language
Up For Grabs up-for-grabs.net	Projects that have explicitly set aside work for new contributors
First Contributions github.com/firstcontributions/first-contributions	Step-by-step walkthrough of making your very first PR — great for absolute beginners
GitHub Explore github.com/explore	Trending repos and topics — find communities you're interested in

GSoC Preparation

Resource	Description
GSoC Organisation List summerofcode.withgoogle.com/programs/2025/organizations	Browse all participating orgs — start checking which ones match your interests now
GSoC Contributor Guide google.github.io/gsocguides/student	Official guide on how to approach GSoC as a student contributor
OpenSSF Best Practices bestpractices.coreinfrastructure.org	Security badge program for OSS projects — understanding this helps you contribute to security-conscious orgs

Share what you fixed today on LinkedIn
