

Pre-Session Guide

Session 4: Build Fast, Ship Secure · Open Source & Security · 1.5 hrs

GDG on Campus RVCE · DevSprint '26

Please complete all setup steps before the session.

It is recommended to have the below setup ready in case you want to try out the tools side by side.

Mandatory Setup — Do These Before You Arrive

#	Requirement	How to verify it's working
1	Laptop with internet + working terminal	Open a terminal and type ls — it should respond
2	GitHub account with at least one repo	Log into github.com — even a hello world repo counts
3	Node.js installed	Run node -v in terminal — should print a version number
4	OR Python installed (either is fine)	Run python --version in terminal
5	Git configured with GitHub account	Run git config --global user.email — should print your email
6	VS Code or any code editor open	Open it, create a test file, save it — confirm it works
7	One existing project folder on your laptop	A college assignment works — you'll run git and npm commands on it

Optional but Recommended: Docker Desktop

Download free from docker.com/products/docker-desktop.
